Ben Morrison Boston, MA | ben-morrison.com | LinkedIn

FULLSTACK SOFTWARE ENGINEER

Left a pharmaceutical sciences PhD to build software, bringing a researcher's rigor to design systems, ETL pipelines, accessible interfaces, and AI developer tooling in TypeScript, React and Node, or whatever stack the team uses.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Cypher, HTML, CSS/Sass
Frontend: React, React Native, Expo, Next.js, Vue, Electron, Tailwind, MUI, shadcn/ui, React Router, TanStack Query, Redux/RTK, Zustand, GSAP, Data visualization (Chart.js), Accessibility (WCAG, ARIA), Responsive design/dev
Backend & data: Node.js, Bun, Express, REST, GraphQL, WebSockets, Zod, PostgreSQL, SQLite, Neo4j, ETL, JWT, OIDC/SSO, Entra ID, Django
AI & Agents: Claude Code, Kiro CLI, MCP, LLM integration, Claude API, OpenAI API
Design systems: Design tokens, Style Dictionary, Storybook, Chromatic, Figma Plugin API, Figma REST API
DevOps & tooling: AWS (CDK), Docker, Kubernetes, Rancher, GitLab CI/CD, GitHub Actions, nginx, Turborepo, pnpm, Vite, Webpack, esbuild, PostCSS, Jest, Vitest, Playwright, ESLint

PROFESSIONAL EXPERIENCE

Charter Communications / Spectrum April 2025 – Present
Software Engineer
• **AI Tool Registry:** Proposed and built, with one other engineer, a TypeScript SDK and CLI for AI agent tools, now adopted as the company-wide registry for Kiro CLI and Claude Code across 40+ teams; retained as a core engineer.
• **Codebase Intelligence Platform:** Initiated and built, with one teammate, an ETL pipeline (SQLite, Neo4j) and 23-tool MCP server to map a 40+ package micro-frontend; used by VPs/directors for feature scoping and dependency analysis.
• **Accessibility & Tablet Readiness:** Led WCAG AA remediation of 150+ issues across 15+ teams, completed ahead of schedule, and delivered responsive in-store tablet experiences ~6 weeks early, for a platform used by thousands of agents.
• **AI Document Orchestration:** Proposed with a designer, then built with one teammate, an AI document builder (React, Bun, PostgreSQL) converting guided chat into PRDs in real-time; 15 pilot users across two teams report faster first drafts.
• **Design Token Pipeline:** Built, on a two-person team, a Style Dictionary pipeline replacing hand-maintained tokens with npm packages for web, iOS and Android; owned its bidirectional Figma sync as well as an MCP server for AI agents.
• **Interactive UX Prototypes:** Replaced static mockups in UX testing with 10+ interactive React prototypes (3 solo), adding WebSocket and event-driven Node backends when needed for live behavior; surfaced flaws that led to redesigns.
• **Enterprise Identity & Access:** Independently built Entra ID SSO (OIDC), in-app RBAC and usage analytics for the team's internal tools site, used by 30+ people from VPs to developers, removing its sign-in step and stored passwords.

Verizon December 2024 – April 2025
Senior Figma Plugin Developer **Contract**
• **AI Design Auditing:** On a three-engineer team, built the Figma plugin (TypeScript, React) for an AI tool suggesting design system components to replace custom parts, ~85% accurate on a benchmark; tuned its Python LLM responses.
• **Customizing Components:** Independently prototyped a Figma plugin (TypeScript, React) that themes design system components within token limits and exports larger changes as JSON overrides; well received by the design system lead.

Charter Communications October 2024 – December 2024
Software Engineer I • Short-term contract; rehired as Software Engineer in April 2025, after the Verizon contract.

Troska Health July 2024 – December 2024
Fullstack Software Engineer – Health Insurance PaaS Startup **Part-time**
• **Web + Mobile Component Libs:** Built matching React and React Native (Expo, solo) component libraries from Figma designs, with shared design tokens and Storybook docs, speeding feature development by about a third (team estimate).
• **Passwordless Authentication:** Built magic-link sign-in end to end, from React and TypeScript screens to an Express API that emails a signed JWT link and verifies it against PostgreSQL accounts; used by ~50 early users and testers.
• **Build Performance:** Cut build times from a couple minutes to a few seconds by replacing separate, repeated build steps with one cached Turborepo pipeline and by tuning the webpack configuration; unchanged packages were never rebuilt.

PROJECTS

ben-morrison.com: React/TypeScript site on AWS CDK with a token-based component library, tested to WCAG 2.2 AA.

EDUCATION

Fullstack Academy Software Engineering Bootcamp 2024
St. John's University - M.S. Pharmaceutical Sciences 4.0 GPA. Data science focus. Left PhD for software. 2024
State University of New York, Binghamton - B.S. Biological Sciences. Cum Laude. 2021
