Ben Morrison Boston, MA | ben-morrison.com | LinkedIn

FULLSTACK SOFTWARE ENGINEER

Left a pharmaceutical sciences PhD to build software, bringing a researcher's rigor to design systems, ETL pipelines, accessible interfaces, and AI developer tooling in TypeScript, React and Node, or whatever stack the team uses.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Cypher, HTML, CSS/Sass, Rust, Java
Frontend: React, React Native, Expo, Next.js, Vue, Electron, Tailwind, MUI, shadcn/ui, Radix, React Router, TanStack Query, Redux/RTK, Zustand, GSAP, Mapbox GL, Chart.js, Accessibility (WCAG, ARIA), Responsive design/dev
Backend & data: Node.js, Bun, Express, REST, GraphQL, WebSockets, Zod, PostgreSQL, SQLite, Neo4j, ETL, JWT, OIDC/SSO, Entra ID, Auth0, Spring Boot, Django
AI & Agents: Claude Code, Kiro CLI, MCP, LLM integration, Claude API, OpenAI API
Design systems: Design tokens, Style Dictionary, Storybook, Chromatic, Figma Plugin API, Figma REST API
DevOps & tooling: AWS (CDK), Docker, Kubernetes, Rancher, GitLab CI/CD, GitHub Actions, nginx, Turborepo, pnpm, Vite, Webpack, esbuild, Babel, PostCSS, Jest, Vitest, Playwright, Postman, ESLint

PROFESSIONAL EXPERIENCE

Charter Communications / Spectrum April 2025 – Present
Software Engineer
• **AI Tool Registry:** Unified fragmented internal AI tooling by co-building a TypeScript SDK and CLI for Kiro CLI and Claude Code, adopted as the company's enterprise wide AI tool registry; stayed on the core dev team after handoff.
• **Codebase Intelligence Platform:** Addressed poor visibility into a 50+ package React micro-frontend by co-building a CLI-driven ETL pipeline into SQLite and Neo4j, with a 23-tool MCP server that lets engineers and AI agents query it.
• **Accessibility & Tablet Readiness:** Led WCAG AA remediation and in-store tablet responsiveness for a platform used by thousands of agents, coordinating fixes across 15+ teams; the tablet work shipped in two-thirds of its planned time.
• **AI Document Orchestration:** Streamlined PRD and product document drafting by co-building an AI-powered orchestrator that lets product consultants chat and update structured documents in real time; now in pilot with two teams.
• **Design Token Pipeline:** Solved token management inefficiencies by co-building a Style Dictionary pipeline that bidirectionally syncs tokens with Figma variables and publishes them as npm packages for web, iOS and Android.
• **Interactive UX Prototypes:** Replaced static mockups in UX testing with 10+ interactive React prototypes, adding WebSocket and event-driven Node backends as needed to match prod functionality; surfaced issues mockups missed.
• **Enterprise Identity & Access:** Handled limited visibility and access control by implementing Enterprise SSO via Entra ID (OIDC), delivering usage analytics and in-app role-based permission management for our team's internal tools site.

Verizon December 2024 – April 2025
Senior Figma Plugin Developer **Contract**
• **AI Design Auditing:** Co-built a Figma plugin that suggests design system components to replace custom design parts, about 85% accurate in testing, replacing designers' manual self-review; tuned the LLM responses.
• **Customizing Components:** Facilitated flexible theming by prototyping an interactive Figma plugin for variant property editing within token limits, exporting larger changes as JSON theme overrides so teams could still adopt the system.

Charter Communications October 2024 – December 2024
Software Engineer I • Short-term contract; returned in April 2025, after the Verizon contract.

Troska Health July 2024 – December 2024
Fullstack Software Engineer – Health Insurance PaaS Startup **Part-time**
• **Web + Mobile Component Libs:** Built matching React and React Native (Expo) component libraries from Figma designs, with shared design tokens and Storybook docs, making feature development about a third faster (team estimate).
• **Passwordless Authentication:** Built magic-link sign-in end to end: React and TypeScript screens, and an Express API that emails a signed JWT link and verifies it against PostgreSQL accounts; used by 50+ early users and testers.
• **Build Performance:** Cut builds from a couple minutes to a few seconds by replacing separate repeated build steps with one cached Turborepo pipeline and by tuning webpack, so unchanged packages were never rebuilt.

PROJECTS

ben-morrison.com: React/TypeScript site on AWS CDK with a token-based component library, tested to WCAG 2.2 AA.

EDUCATION

Fullstack Academy Software Engineering Bootcamp 2024
St. John's University - M.S. Pharmaceutical Sciences 4.0 GPA. Data science focus. Left PhD for software. 2024
State University of New York, Binghamton - B.S. Biological Sciences. Cum Laude. 2021
